Director Enterprise Business
Oracle, Pakistan

ABOUT WEBINAR

Integrated, streamlined, responsive and agile are the key words used to define what organizations must be developed into, in order to stay profitable, in particular for the sustainability of SMEs in today's global and digitally competitive environment that businesses face. With advancements in information technology (IT), the enterprise resource planning (ERP) systems are viewed as a key enabler of an organization's business service delivery. However, ERPs are somehow associated to large companies only, presumably, due to heavy investment it requires. It is therefore, important to explore cost effective ERP solution meant for SMEs.

The webinar covers the vendors' perspectives to implement and deploy ERP systems for SMEs. This special webinar will take the viewership forward with the application of ERP, which includes four clear areas of benefit to the SMEs:

- Advancement in business agility
- Gain control and insights
- Support business growth
- Analyzing and interpreting the data to extract real value for the business and their stakeholders

The Board announced the 2nd Webinar titled **“ERP for SMEs – Tech driven response, controls and delivery with affordability”** with an aim to pave the pathway toward incubating sustainable digital ecosystem for Small and Medium Size Enterprises (SMEs).
